

GreenEnergyWorld

connecting visions

Finding the right partner for renewable energy projects

GreenEnergyWorld – International trading portal for renewables energy projects brings together investors with project developers and operators of wind turbines. Central interface is an online project market.

“Find the right partner that suits you”. Partner agencies advertise with such or similar slogans in large-sized ads; an ancient and never-ending market. Nevertheless, not only men and women have agency demands.

Even investors are globally searching for attractive investments. Operators and project developers, however, are in desperate need for fresh capital. The global market for renewables is still young and yet showing explosive development. Regardless of this, idea and capital are having a hard time finding each other. There are several billion Euros of investment capital on call worldwide that could be used for the construction of wind, solar and bioenergy power plants. This is where the young, Berlin based company GreenEnergyWorld GmbH is docking with her business idea.

Online trading portal

Business Development Manager Denis Kühn knows what it comes down to in this business, “...it is the thorough preparation of the project documentation and a well targeted approach to investors.” Via the online trading portal www.green-energy-world.com project developers, operators and investors will be able to come closer efficiently and goal-oriented. Currently, GreenEnergyWorld is concentrating on the marketing of wind farms and solar parks. Projects on offer range between greenfield and turnkey installations. Especially the young and developing East-European energy markets in Bulgaria and Poland are the focus of project acquisition. In these countries cooperation partners are collaborating with GreenEnergyWorld. They are locally connecting with project developers and then continuing collaboration on site.

“Indeed, special about our marketing service is GreenEnergyWorld’s Europe-wide cooperation partner system. Plus, we also have access to a network of international experts in the renewables industry: i.e. consultants, auditors, equipments manufacturers, contractors and lawyers. Using this network we are able to add more services and support for our clients while reevaluating their projects”, says D. Kühn.

Interface for local project developers and global investors

Key to a successful marketing of wind turbines are the systematic assessment of project data and comprehensive project exposés. Crucial to the success of the services are a sound knowledge and experience with project development at home and abroad. This way the seven team members of GreenEnergyWorld are able to successfully support their clients with selling projects and searching for the best access to capital.

GreenEnergyWorld stands out due to its high quality standards for the project assessment. Projects will be thoroughly checked in advance. Evaluation and assessment of profitability are core steps in GreenEnergyWorld's supply chain. The systematically prepared exposés contain detailed data about the project and its profitability.

The cooperation with different European partners allows GreenEnergyWorld direct contact to project developers and buyers in different markets. The trading platform www.green-energy-world.com acts as interface between local project owners and global investors. At present wind and solar projects in Germany, Bulgaria, Italy, Romania, Poland, Greece and Spain are on offer.
