

GreenEnergyWorld markets 12.6 Megawatt Wind Park in Bulgaria

Current press release from Oct. 27nd 2008

Link between global investors and local project developers

Green Energy World GmbH has marketed her first Bulgarian wind energy project for a local project developer. The 12.6 Megawatt project is situated in the wind blessed region of North-East Bulgaria. The wind park has been planned with Suzlon S88 wind turbines having 88 m in rotor diameter. Commissioning of the park has been advised for the fourth quarter 2009.

After six months of negotiations the project has now been sold to a Swiss investor. „Marketing international wind projects is a longsome business. All the more we are very happy about the accomplished results, for both partners“, concludes Managing Director Denis Kuehn shortly after the transaction in mid-October. For the buyer this translates into an investment volume of approx. 20 million euro. GreenEnergyWorld staff has been frequently visiting Bulgaria, counseling the project developers on site. „This is the distinctive feature of our services“, continues Denis Kuehn. „Right from the beginning we have been comprehensively attending to our clients to support them with the cross-national contract negotiations until the successful contract closure.“

Bulgaria as much as Poland is one of GreenEnergyWorld's East-European target markets. The company anticipates further marketing successes in these countries later this year.

About GreenEnergyWorld

Green Energy World GmbH is a service provider in the field of renewable energies. As a marketing agency the company supports project developers and operators with the implementation and marketing of their wind and solar farms.

GreenEnergyWorld's commitment addresses all project stages from greenfield, development, turn-key to operation and repowering. The online project market www.green-energy-world.com is an international exchange interface for global investors and local project developers. Projects are offered from a variety of European countries.
